

Director Innovation & Development

Tradewater is a mission-based company headquartered in Chicago and operating around the world. We collect, manage, and destroy greenhouse gases. Our projects are designed to fight climate change, create economic development opportunities, and make a profit. We believe companies with this mission are better positioned for growth and success in a changing economy. And we are proving it year over year.

Tradewater is currently destroying about 1 million tons of carbon dioxide equivalent per year, and we seek to triple that volume by the end of 2022 by leveraging off of our very successful greenhouse gas mitigation program to diversify our products, services, and markets.

Tradewater is seeking a dynamic, talented, and curious professional to build and lead our Department of Innovation and Development. The Department is responsible for evaluating new markets in the US and abroad and building programs and projects that achieve our aggressive mission impact goals within those markets. The Director will lead a team of research and development associates and data analytics specialists to conduct research, examine market potential, pilot test projects, evaluate results, and scale new business lines and approaches. Thus, the Director must be able to anticipate organizational needs, develop efficient and effective implementation plans, and have the ability to manage several diverse projects simultaneously. The Director is both a leader and a doer. The job is both internal and outward facing.

Tradewater offers a competitive salary and good benefits. If you are interested, please send a cover letter and resume to Jessica Dixon at jdixon@tradewater.us explaining your interest in this position, why you would be well suited for it, and how you would use your experiences to be successful in the role. An initial phone screen meeting will be held with qualified candidates, followed by up to three rounds of in person interviews and discussions with Tradewater's leaders.
